Immunostimulatory sequences (ISS) are short oligonucleotides containing unmethylated cytosine-phosphate-guanine (CpG) dinucleotides that stimulate innate immune responses through Toll-like receptor-9 on B cells and plasmacytoid dendritic cell (PDC) precursors. The anti-inflammatory cytokine interleukin (IL)-10 is predicted to be a potent inhibitor of many of the activities described for ISS, and this may impact the use of ISS in disease states characterized by elevated IL-10. As the activities of ISS on PDCs are central to many clin. applications of ISS, we have studied the effects of IL-10 on PDC stimulation by 3 distinct classes of ISS. IL-10 inhibited cytokine production and survival of ISS-activated PDCs; however, IL-12 induction was much more sensitive to inhibition than interferon (IFN)- α induction. Within the PDC population are cells that respond to ISS by producing either IL-12 or IFN- α but not both cytokines. IL-12-producing PDCs require costimulation through CD40 and appear more mature than IFN- α -producing PDCs. The 3 distinct classes of ISS differed with respect to induction of PDC maturation and T-cell priming capacity. IL-10 regulated PDC activation but did not inhibit the subsequent T-cell-priming ability of PDCs already activated by ISS.

AB The invention provides immunomodulatory compds. and methods for immunomodulation of individuals using the immunomodulatory compds. The immunomodulatory compds. comprise two or more nucleic acid moieties and a non-nucleic acid spacer moiety. The nucleic acid contains e.g. 5'-CG-3', 5'-TCG-3', 5'-TCGA-3', 5'-TCGACGT-3', or 5'-TCGACGA-3'; and the non-nucleic acid is an oligoethylene glycol such as hexaethylene glycol. The chimeric compds. are incorporated into endotoxin-free compns. comprising antigen, pharmaceutically acceptable excipient, and optionally a cationic microsphere for modulating immune response.

AB Two different types of CpG motif-containing oligonucleotides (CpG ODN) have been described: CpG-A with high induction of IFN- α in plasmacytoid dendritic cells; and CpG-B with little induction of IFN- α , but potent activation of B cells. In this study, we demonstrate that CpG-A fail to activate B cells unless plasmacytoid dendritic cells are present. We identified a new set of CpG ODN sequences which induces high levels of IFN- α in plasmacytoid dendritic cells but remains capable of directly activating B cells. These new CpG ODN (termed CpG-C) are more potent stimulants of B cells than CpG-B due to their ability of directly and indirectly

Searcher : Shears 571-272-2528

...;

(via plasmacytoid dendritic cells) activating B cells. The sequence of CpG-C combines structural elements of both CpG-A and CpG-B. The most potent sequence, M362, contains a 5'-end "TCGTCG-motif" and a "GTCGTT-motif", both of which are present in CpG-B (ODN 2006); a palindromic sequence characteristic for CpG-A (ODN 2216); but no poly G motif required for CpG-A. In conclusion, we defined the first CpG-containing sequences that potently activate both TLR9-expressing immune cell subsets in humans, the plasmacytoid dendritic cell and the B cell. CpG-C may allow for improved therapeutic immuno-modulation in vivo.

DOCUMENT TYPE: Journal LANGUAGE: English

AB Recent reports have identified two major classes of CpG motif-containing oligodeoxynucleotide immunostimulatory sequences (ISS): uniformly modified phosphorothicate (PS) oligodeoxyribonucleotides (ODNs), which initiate B cell functions but poorly activate dendritic cells (DCs) to make interferon (IFN)- α , and chimeric PS/phospho diester (PO) ODNs containing runs of six contiguous guanosines, which induce very high levels of plasmacytoid DC (PDC)-derived IFN- α but poorly stimulate B cells. The authors have generated the first reported ISS, C274, which exhibits very potent effects on all human immune cells known to recognize ISS. C274 is a potent inducer of IFN- γ /IFN- α from peripheral blood mononuclear cells and exhibits accelerated kinetics of activity compared with standard ISS. This ODN also effectively stimulates B cells to proliferate, secrete cytokines, and express costimulatory antigens. In addition, C274 specifically activates PDCs to undergo maturation and secrete cytokines, including very high levels of IFN- α . Sequence

Searcher : Shears 571-272-2528

variation studies based on C274 were used to identify the general motif requirements for this novel and distinct class of ISS. In contrast, chimeric PO/PS CpG-containing ODNs with Poly guanosine sequences exert a differential pattern of ISS activity compared with C274, perhaps in part as a result of their greatly different structural nature. This pattern is composed of high IFN- α /IFN- γ induction and low DC maturation in the absence of B cell stimulation. In conclusion, the authors have generated a novel class of ISS that transcends the limitations ascribed to classes described previously in that it provides excellent stimulation of B cells and simultaneously activates PDCs to differentiate and secrete large amts. of type I IFN.

The invention provides immunomodulatory compds. (CIC) and methods

571-272-2528 Searcher : Shears

for immunomodulation of individuals using the immunomodulatory compds. The CIC comprises one or more nucleic acid moieties and one or more non-nucleic acid moieties such as dendrimer, polysaccharide, and crosslinked polysaccharide through phosphodiester, phosphorothicate ester, phosphorodithicate ester, and other linkages. The CIC is capable of stimulating production of interferon γ and α by human peripheral blood mononuclear cells, as well as human B cell proliferation. Endotoxin-free compns. comprising the CIC covalently or non-covalently conjugated with antigen and cationic microsphere are useful for treating disorders associated with IgE or Th2-type immune response such as allergy, asthma, infection, viral infection, idiopathic pulmonary fibrosis, and cancer.

OTHER SOURCE(S):
    The invention provides immunomodulatory polynucleotides and methods
     for immunomodulation of individuals using the immunomodulatory
     polynucleotides. Each immunomodulatory polynucleotide comprises at
     lease one immunostimulatory sequence (ISS). Thus, administration of
     5'-tgactgtgaazgttzgagatga-3' (where z = 5-bromocytosine) in
     conjunction with hepatitis B surface antigen (HBsAg) to baboons
     resulted in increased titers of anti-HBsAg antibodies as compared to
     administration of HBsAg alone or to administration of HBsAg with a
     non-ISS oligonucleotide. Complexation of immunomodulatory
     polynucleotides with cationic poly(lactic acid, glycolic acid)
     microspheres in a human PBMC assay showed significantly enhanced
     induction of interferon \alpha and interferon \gamma in comparison
     to the polynucleotides alone.

Gaston Cremieux, 91057 Evry cedex, FRANCE
PCR was performed on DNA from transformants of Arabidopsis thaliana
plants from INRA (Versailles). The DNA fragment(s) resulting from
the PCR were directly sequenced from the left or the right border
to determine the genomic sequence flanking the insertion. T-DNA:
derived sequences were removed. Information to order the
corresponding mutant line and a link to a database providing a
graphical display of the insertion site are available at
http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
been generated in the framework of the French plant genomics
program 'Genoplante' (http://www.genoplante.com and
http://genoplante-info.infobiogen.fr).

For the latest information on annotation of this clone, please see
http://www.kazusa.or.jp/kaos/cgi-bin/agd_graph.cgi?c=K15C23
Genes with similarity to proteins in the databases are described in
'product' or 'note' qualifiers. Genes that have no significant
protein similarity are described as 'unknown protein'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compbio.ornl.gov/Grail-1.3/).
MetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of
Denmark, http://www.bbs.dtu.dk/services/NetGene2/) and
SplicePredictor (Volker Brendel, Stanford University,
http://gremlinl.zool.iastate.edu/ggi-bin/sp.cgi).
Genes encoding tRNAs are predicted by tRNAscan-SB (Sean Eddy, Washington University School of Medicine, St. Louis,
http://genome.wusfl.edu/eddy/tRNAscan-SB/).
This sequence may not be the entire insert of this clone. It may be
shorter because we remove overlaps between neighboring submissions.
The 5' clone is MFC16 and the 3' clone is K23L20.

The present invention describes an immunomodulatory polynucleotide (I) comprising an immunostimulatory sequence (ISS). Also described: (I) an immunomodulatory composition comprising (I); (2) an immunomodulatory polynucleotide/microcarrier (IMP/MC) complex, comprising (I) linked to biodegradable MC, where the MC is less than 10 micrometre in size; and (3) a kit comprising (I). (I) has antiallergic, antiasthmatic, virucide

Immunomodulatory polynucleotide for modulating an immune response subject suffering from disorders associated with Th2-type immune response, e.g. allergy, or infectious disease, comprises an immunostimulatory sequence.

WPI; 2002-657426/70.

(I) is further useful for ameliorating a symptom of an infectious disease caused by a cellular pathogen such as mycobacterial disease, malaria, leishmaniasis, toxoplasmosis, schistosomiasis and clonorchiasis in an individual, or symptom of an immunoglobulin E (IGB) related disorder, preferably an allergy-related disorder, in particular asthma in an individual. The present sequence represents an immunomodulatory oligonucleotide from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Immunostimulatory sequence; ISS: immunomouuracury, immunostimulatory sequence; ISS: immunomouuracury, immunostimulatory fibrosis disease; interferon-gamma; IFN-gamma; adiopathic pulmonary fibrosis; viral infection; mycobacterial disease; malaria; leishmaniasis; toxoplasmosis; schistosomiasis; clonorchiasis; malaria; leishmaniasis; toxoplasmosis; schistosomiasis; clonorchiasis; immunoglobulin E; ISE-related disorder; antiallergic; antiasthmatic; immunoglobulin E; ISE-related disorder; ss.
comprising an immunostimulatory sequence (ISS). Also described: (1) an immunomodulatory composition comprising (I); (2) an immunomodulatory polynucleotide/microcarrier (IMP/MC) complex, comprising (I) linked to biodegradable MC, where the MC is less than 10 micrometre in size; and (3) a kit comprising (I). (I) has antiallergic, antiasthmatic, virucida antibacterial and protozoacide activities, and can be used as a modulated to the matter of the m
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antibacterial and protozoacide activities, and can be used as a modula, of immune response. [1] is useful for modulating an immune response in individual suffering from disorders associated with a Th2-type immune response, especially an allergy or asthma, or an infectious disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of immune response. (I) is useful for modulating an immune response in an individual suffering from disorders associated with a Th2-type immune response, especially an allergy or asthma, or an infectious disease. (I) is also useful for increasing interferon-gamma (IFW-gamma) in an individual having idiopathic pulmonary fibrosis, or IFW-gamma) in an individual having a viral infection. (I) is further useful for ameliorating a symptom of an infectious disease caused by a cellular pathogen such as mycobacterial disease, malaria, leishmaniasis, toxoplasmosis, schistosomiasis and clonorchiasis in an individual, or a symptom of an immunoglobulin E (IGE)-related disorder, preferably an allergy-related disorder, in particular asthma in an individual. The present sequence represents an immunomodulatory oligonucleotide from the
The invention relates to novel immunomodulatory polynucleotide/ microcarrier complexes comprising heptameric oligonucleotides comprising a 5, CG-3, sequence. A complex of the invention has antiasthmatic, antiallergic, antiinflammatory, cytostatic, virucide, hepatotropic, protozoacide, antiulcer, and dermatological activity. The complexes are useful for modulating an immune response, increasing interferon-gamma, increasing interferon-alpha, and reducing levels of IgEr. The complexes can also be used in vaccines, to treat, for example, asthma, rhinitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; IMP; immunomodulatory polynucleotide; m antiasthmatic; antiallergic; antiinflammatory; hepatotropic; protozoacide; antiulce; dermato

having immunomodulatory activity, comprising two or more nucleic acid come non-nucleic acid spacer moiety is covalently joined to two nucleic come non-nucleic acid spacer moiety is covalently joined to two nucleic acid moieties, where the spacer is not a polypeptide, and at least one nucleic acid moiety comprises the sequence 5'-CG-3'. The chimeric compounds more specifically contain the nucleic acid spacer moieties of linear hexaethylene glycol structure (HEG) subunits. CC CIC's are useful for modulating an immune response in an individual, where the individual suffers from a disorder associated with a Thi-type cimmune response which is an allergy or allergy-induced asthma, and an CC infectious disease. CIC is also useful for increasing IFN-gamma; or IFN-CC alpha; in an individual, where the individual has idiopathic pulmonary CC siphosis, or a viral infectious. CIC's are useful for ameliorating a CC symptom of an infectious disease, or an immunoglobulin E (IgE)-related CC disorder in an individual, where the IgE-related disorder is allergy, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
